PRODUÇÃO DE  
COELHOS  
BIOLÓGICOS

*The 'Produção de Coelhos Biológicos' initiative creates a new opportunity for national producers*

## CONTEXT

Portugal has great potential for organic rabbit farming.

However, the lack of specific legislation, as well as experience and dissemination of knowledge means that the production of biological rabbits in our country is currently non-existent.

## GOALS

- Create a new product: domestically produced organic rabbit.
- Test and adapt this new production method to the specific conditions of our country.

## EXPECTED RESULTS

- Install at least one organic rabbit production farm.
- Create a "Manual prático da Produção Biológica de Coelhos em Portugal".
- Disseminate the organic rabbit production method to other rabbit breeders.
